SEPTEMBER NEWSFLASH

USGS PRESENTING

RESULTS OF AREA WATER INVESTIGATION!

6:30 P.M. FRIDAY SEPTEMBER 24TH

COCHISE COLLEGE - BENSON CENTER

Jesse Dickinson, Project Lead, will interpret the data and answer questions to help us better understand the potential for water availability in the area.

Since October 2005, USGS has collected data within the Middle San Pedro area to define the shape, size and parameters of our groundwater system. The northern boundary of the study coincides with the watershed defined at the streamflow gaging-station near Redington with the southern boundary coinciding with the Sierra Vista Subwatershed.

Areas of the groundwater system that received special attention are the "Narrows", Kartchner Caverns, Benson, proposed new residential development areas, and known areas of contamination such as the Apache Superfund Site.

[Click here](#) for the report on the hydrogeology of the middle San Pedro watershed - now available on the web.
